

Proceedings of the Institution of Electrical Engineers Volume 42

Filesize: 1.42 MB

Reviews

*Very good e-book and helpful one. It is among the most awesome publication we have read. Its been developed in an remarkably simple way in fact it is simply right after i finished reading this book through which basically transformed me, affect the way i really believe.
(Prof. Kacey O'Hara)*

PROCEEDINGS OF THE INSTITUTION OF ELECTRICAL ENGINEERS VOLUME 42

To download **Proceedings of the Institution of Electrical Engineers Volume 42** eBook, you should refer to the hyperlink below and download the document or have access to other information which are relevant to PROCEEDINGS OF THE INSTITUTION OF ELECTRICAL ENGINEERS VOLUME 42 ebook.

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1909 Excerpt: . of the electron and the molecules of air (i.e., along its mean free path) is 30 volts, the electron will acquire sufficient energy to ionise the molecules. With point electrodes this field intensity is first reached at the points, and as the ionisation goes on increasing and the kinetic energy of the ions increases the glow will commence at the points. Along certain paths from the points where the collisions are great the brush discharges form. Since the positive ion requires a difference of potential of 440 volts along its mean free path to ionise air molecules, ionisation by these ions takes place at higher potentials and near the breakdown of the gap. It is quite probable that the potential gradient may be great enough very close to the point to cause ionisation, at an earlier stage, by the positive ions as well as by the electrons, and may account for the intenseness of the bright point of the electrode. With the advent of the glow a further ionising factor is the ultra-violet light emitted. It follows that the ionisation by the electric field is of a secondary character; in fact, the manner of the growth of the ions is comparable to the way in which a dynamo excites itself with the small remanent magnetism in its iron circuit. Mr. Mr. E. A. Watson: I should like to add yet another explanation to Watson. those already given of Mr. Cramp s observations on the glow...
