

## A Collection of Problems in Illustration of the Principles of Theoretical Mechanics

Filesize: 1.96 MB

### ***Reviews***

*An exceptional ebook and also the typeface applied was intriguing to read through. I have got read and i also am sure that i am going to likely to go through yet again once more in the foreseeable future. I discovered this pdf from my dad and i advised this ebook to find out.  
(Dr. Raven Ledner)*

## A COLLECTION OF PROBLEMS IN ILLUSTRATION OF THE PRINCIPLES OF THEORETICAL MECHANICS

To read **A Collection of Problems in Illustration of the Principles of Theoretical Mechanics** PDF, remember to follow the button beneath and download the ebook or get access to additional information which are have conjunction with **A COLLECTION OF PROBLEMS IN ILLUSTRATION OF THE PRINCIPLES OF THEORETICAL MECHANICS** book.

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1855 Excerpt: .nature of the curve of constraint when the particle is subject to the action of gravity, and the direction of uniform acceleration is horizontal. A notice of this problem may be seen in the Bulletin des Sciences de Bruxelles, Tom. ix. (3) To determine the curve down which a particle may descend by the action of gravity, so as to describe equal vertical spaces in equal times, the tangent to the curve at the point where the motion commences being vertical. Let  $O$  (fig. 149) be the point where the motion commences,  $Ox$  the axis of  $x$  touching the required curve  $OA$  at  $O$ ,  $Oy$  the axis of  $y$  at right angles to  $Ox$ ; let  $OM=x$ ,  $PM=y$ ,  $\sqrt{3}$  = the invariable velocity of the particle parallel to  $Ox$ .  $ds$  Then  $= C + 2gx$ ,  $C$  being a constant quantity,  $ds dx n n dJW=C+2Vx$  But  $= \sqrt{8}$ ; hence But, when  $x = 0$ ,  $= 0$ ; and therefore  $dx 0 X y \sqrt{3} X$  no constant being added because  $x = 0$ ,  $y = 0$ , simultaneously. The required curve  $OA$  is therefore the semi-cubical parabola,  $O$  being the cusp, and  $Ox$  the axis. This curve is called the Isochrone. It was proposed by Leibnitz<sup>1</sup>, as a challenge to the disciples of Des Cartes, who, from an excessive attachment to the geometry of their master, affected to despise the methods of the Differential Calculus. No solution was communicated by any of the Cartesians. Huyghens alone successfully accepted the...
