Westinghouse two-pole motor or generator. Fig. 116. Path of magnetic lines in modern two-pole generator of Fig. 115. In setting up a motor or generator it is necessary then to note the polarity (whether a pole is north or south) and to cause the current to flow in such a direction through the field coils as to make the poles alternately north and south. 56. Fields Separately or Self-Excited. Direct-current generators are classified as to the source from which the field coils receive their electric current. They are: Separately excited, when the field current comes from some outside source, as storage cells, exciter generators, etc. Self-excited, when the field current is drawn from...
