

Process Mapping and Stochastic Input Modeling

Filesize: 7.96 MB

Reviews

*This type of ebook is everything and helped me looking forward and a lot more. It is actually full of wisdom and knowledge I realized this book from my dad and i suggested this book to discover.

PROCESS MAPPING AND STOCHASTIC INPUT MODELING

To read **Process Mapping and Stochastic Input Modeling** PDF, remember to click the button beneath and download the document or gain access to other information which are have conjunction with PROCESS MAPPING AND STOCHASTIC INPUT MODELING ebook.

Grin Verlag GmbH Nov 2011, 2011. Taschenbuch. Book Condition: Neu. 211x149x7 mm. Besorgungstitel - voraus. Lieferzeit 3-5 Tage. Neuware - Bachelor Thesis from the year 2011 in the subject Business economics - Supply, Production, Logistics, grade: 1,3, Jacobs University Bremen gGmbH (School of Engineering and Science), course: International Logistics, language: English, abstract: Lufthansa Technik (LHT) is a provider of maintenance, repair and overhaul (MRO) services for aircraft. While LHT has traditionally performed the MRO services in-house, the subcontracted operations business is gaining momentum. With about 90,000 outsourced MRO purchase orders (POs) per year, the process becomes increasingly complex. In the past, the company set the objective of achieving an average turnaround time (TAT) of five shop calendar days (SCD) for internal repair operations. One of the main goals of LHT is to achieve an average TAT of fifteen SCD for the subcontracted MRO operations, between the monitoring points Creation PO Requisition (i.e.: TS 29) and Receive Unit Transaction (i.e.: TS 69). The current TAT is significantly higher, with substantial process variability. The repair subcontracting value-chain consists of several processes, which fall under different areas of responsibility. Due to the stochastic nature of the series of processes and because many variables influence the overall performance of the system, a simulation study needs to be conducted. The present thesis aims to develop an analytical input model for a simulation study in technical procurement. Practical relevancy of the research problem The building of the analytical input model and subsequent simulation model is a substantial milestone towards the process optimization in the subcontracted MRO operations business. The modeling of processes as an M/M/1 queuing system is the first step needed in order to i) Simulate the processes and leverage optimization methods from the field of Production Logistics; ii) Identify whether the application of queuing theory elements for process description and analysis within technical procurement would...
